

Homework: Store Sales Report (Python)

Objective

Write a Python program that collects information about **three products**, calculates the **total and average price**, and prints the results in a **formatted table**.

Problem Description

A small store wants to track the prices of products sold in one day.

Write a Python program that:

1. Asks the user to enter the **name and price of three products**.
2. Calculates:
 - The **total price** of the three products.
 - The **average price**.
3. Displays the results in a **nicely formatted table**.

Input example:

Enter product 1 name: Laptop
Enter Laptop price: 900

Enter product 2 name: Mouse
Enter Mouse price: 25

Enter product 3 name: Keyboard
Enter Keyboard price: 60

Example output:

Product	Price
Laptop	900.00
Mouse	25.00
Keyboard	60.00
Total:	985.00
Average:	328.33

Requirements

Your program must:

- Use **input()** to read data from the user.
- Use **float()** for prices.
- Compute:
 - Total price
 - Average price
- Display the output using **formatted printing**.
- Organize the program inside a **main() function**.

File Naming Instructions

Name your Python file using **your student number** in the following format:

#yourStudentNumber.py

Example:

320240605022.py

Submission

Submit your file on **Moodle** before the deadline.

Grading (10 Points)

Criteria	Points
Correct input	2
Correct calculations	3
Table formatting	3
Code organization (main function)	2
